## READ/WRITE CHANNEL DESIGNATION IN PDT INSTRUCTIONS

The following paragraph should be added as Note 3 on pages 8-111 and 8-116 of the Programmers' Reference Manual.

3. Unspecified central processor activity can occur when an attempt is made to execute a Peripheral Data Transfer instruction having a read/write channel designation (control character 1) of zero.

It is therefore imperative that all such PDT instructions contain some legal RWC designation.
