Preface

P.1 Purpose

The IOP Technical Reference Manual describes the hardware on the Dove IOP board. The manual describes the theory of operation of the components, and presents information important for programmer interface.

P.2 Audience

The following groups are expected to refer to this publication:

- Engineers
- System designers
- Microprogrammers
- Field Service personnel

P.3 Organization

After a brief overview, each major part of the IOP board is discussed in a separate section. Components are described as to hardware, theory of operations, and programmer interface.

Hardware describes pins and signals of the component.

Theory of Operations describes system operating modes, which may include timing.

Programmer Interface describes register assignments and timing.

An addendum describes the speaker.

Appendices contain supplementary information about the board and components. Because this manual corresponds to B2 and later builds of machines, earlier machines will have some differences. Appendix C lists the documentation that describes the various issued IOPs found in the Dove machines. Appendix D, reprinted in a separate volume, contains a representative set of schematics.

P.4 References

The following documents contain supplementary information.

AMD 2942 Specification Sheet, Bipolar Microprocessor Logic and Interface 1985 Data Book, Advanced Micro Devices, Sunnyvale, CA

Application Note 8-A Single/Double Density Floppy Disk Controller using the PD765, NEC Microcomputers, Inc.

Daisy System Requirements Specification, Xerox Office Systems Division, 1983.

Data Catalog- Specification sheet on the FDC 9229 chip, Standard Microsystems Corporation.

LAN Components User's Manual, Intel Corporation-1984.

MCC Manchester Code Converter 8023A Data Sheet, Seeq Technology Incorporated, 1985.

Memory Components, 512 x 9 BiPort Parallel In-Out FIFO, United Technologies Mostek.

Microsystems Component Handbook Volumes I and II, Intel Corporation -1984.

Specification sheet on the 8x305 microcontroller, Signetics Corporation.

TABLE OF CONTENTS

1. IOP Board

1.1	Overview	1-1
1.2	Hardware	1-3
1.2.1	Printed wiring board assemblies (PWBA)	1-3
1.2.2	Interfaces to backplane	1-6
1.2.3	Power	1-8

2. I/O Processor and Related Components

2.1	Hardware	2-2
2.1.1	Chip and chip socket	2-2
2.1.2	Pin assignments and description	2-3
2.2	Theory of Operations	2-7
2.2.1	Execution unit	2-7
2.2.2	Integrated DMA unit	2-8
2.2.3	Integrated timer unit	2-9
2.2.4	Integrated interrupt controller	2-10
2.2.5	Clock generator	2-10
2.2.6	Chip select unit	2-10
2.2.7	Integrated peripheral accessing	2-11
2.3	Programmer Interface	2-12
2.3.1	Processor reset and initialization	2-12
2.3.1.1	Local bus controller and reset	2-12
2.3.1.2	Chip select/ready logic and reset	2-13
2.3.1.3	DMA channels and reset	2-13
2.3.1.4	Interrupt controller and reset	2-13
2.3.1.5	Timers and reset	2-13
2.3.2	Chip select address and register bit maps	2-14

3. IOP Memory and Interrupt Controllers

3.1	IOP Memory	3-1
3.1.1	Memory addressing	3-1
3.1.2	Memory mapping	3-2
3.2	Interrupts	3-2
3.2.1	Hardware	3-2
3.2.2	Theory of operations	3-4
3.2.2.1	Master interrupt controller	3-4
3.2.2.2	Slave interrupt controllers	3-5
3.2.3	Programmer interface	3-7
3.2.3.1	Registers	3-7
3.2.3.2	Timing	3-11

4. Bus Arbiter and Mode Control

4.1	Hardware	4-2
4.2	Theory of Operations	4-3
4.2.1	Ethernet and rigid disk combinations	4-4
4.2.2	IOP, PCE, Ethernet, and rigid disk combinations	4-9
4.2.3	Arbiter flow diagrams	4-15

5. Rigid Disk Subsystem

	Subsystem architecture	5-1
	Subsystem programming overview	5-2
5.1	Rigid Disk Drive	5-7
5.1.1	Hardware	5-7
5.1.2	Theory/Programmer interface	5-7
5.2	Rigid Disk Controller	5-8
5.2.1	Hardware	5-9
5.2.2	Theory of operations	5-11
5.2.2.1	Command/status registers	5-12
5.2.2.2	Scratch pad and local memory	5-12
5.2.2.3	Drive status and drive control registers	5-12
5.2.2.4	Microcontroller data paths	5-12
5.2.2.5	Write logic data path	5-13
5.2.2.6	Read logic data path	5-14
5.2.2.7	Reading and writing the DMA and FIFO	5-15

5.2.3	Programmer interface	5-16
5.2.3.1	Registers	5-16
5.2.3.2	Timing	5-19
5.3	DMA Controller	5-21
5.3.1	Hardware	5-22
5.3.1.1	DMA signals	5-22
5.3.1.2	DMA as a peripheral for IOP 80186	5-24
5.3.2	Theory of operations	5-25
5.3.2.1	DMA state machine	5-25
5.3.2.2	States of the state machine	5-26
5.3.2.3	Operating sequence	5-29
5.3.2.4	State machine timing	5-31
5.3.2.5	Wait states for slower memories	5-41
5.3.3	Programmer interface	5-45
5.3.3.1	Address register	5-46
5.3.3.2	Word count	5-47
5.3.3.3	Control register on AM2942 chip	5-47
5.3.3.4	DMA command register	5-48
5.3.3.5	DMA status register	5-48
5.3.3.6	Programming DMA transfers	5-49
5.4	Rigid Disk FIFO	5-51
5.4.1	Hardware	5-52
5.4.2	Theory of operations	5-52
5.4.3	Programmer interface	5-53

6. Ethernet Controller

6.1	Overview	6-1
6.1.1	Controller functional blocks	6-2
6.1.2	Controller relationship to standards	6-3
6.2	Hardware	6-3
6.3	Theory of Operations	6-9
6.3.1	Interfaces	6-9
6.3.1.1	Communicating with the transceiver	6-9
6.3.1.2	Communicating with the SIA and DLC	6-10
6.3.1.3	Communicating with the IOP	6-11
6.3.1.4	Communicating with the IOP bus	6-12

6.3.2	Processes leading to data transmission and reception	6-14
6.3.2.1	Initialization	6-14
6.3.2.2	Successful boot	6-15
6.3.3	Data transmission and net management	6-15
6.3.3.1	Transmission	6-16
6.3.3.2	Network management	6-17
6.3.4	Data reception	6-19
6.3.4.1	Initializing	6-19
6.3.4.2	Receiving a frame	6-19
6.3.5	Diagnostics	6-21
6.3.5.1	Hardware diagnostics	6-22
6.3.5.2	Software diagnostics	6-22

7. Floppy Disk Subsystem

7.1	Hardware	7-2
7.1.1	Floppy disk drives	7-2
7.1.2	Diskettes	7-2
7.1.3	Floppy disk controller	7-3
7.1.3.1	Controller interface	7-3
7.1.3.2	Data separator	7-6
7.2	Theory of Operations	7-8
7.2.1	Floppy disk controller	7-9
7.2.2	Data separator	7-9
7.2.3	80186 processor (DMA and timer)	7-9
7.2.4	Interrupt controllers	7-10
7.2.5	Control register	7-10
7.2.6	Buses	7-10
7.3	Programmer Interface	7-10
7.3.1	Registers	7-10
7.3.1.1	Floppy disk controller registers	7-11
7.3.1.2	DMA registers	7-13
7.3.1.3	Timer registers	7-14
7.3.1.4	IOP control registers	7-14
7.3.2	Interrupts	7-16
7.3.3	Reset	7-16
7.3.4	Diskette format	7-16

7.3.4.1	Preambles and postambles	7-17
7.3.4.2	Sectors	7-18

8. RS232C Controller

8.1	Hardware	8-1
8.1.1	Serial controller	8-1
8.1.1.1	Controller	8-2
8.1.1.2	Timer	8-4
8.1.2	Interfaces	8-6
8.1.2.1	System interface signals	8-6
8.1.2.2	8274 interface ports	8-7
8.1.2.3	Interface connectors	8-9
8.1.3	Serial channels	8-10
8.2	Theory of Operations	8-11
8.3	Programmer Interface: Registers	8-12
8.3.1	External registers	8-12
8.3.2	8274 serial controller registers	8-13
8.3.2.1	Write registers	8-13
8.3.2.2	Read registers	8-17
8.3.3	8254 timer registers	8-18

9. Keyboard/Mouse Controller and Maintenance Panel

9.1	Hardware	9-1
9.2	Theory of Operations/Programmer Interface	9-2
9.2.1	Keyboard and mouse interface	9-2
9.2.2	Registers	9-3
9.2.2.1	Command registers	9-3
9.2.2.2	Status registers	9-5
9.2.3	Maintenance panel	9-6
9.2.3.1	Normal commands	9-7
9.2.3.2	Special commands	9-7

10. Debugger Interface

10.1	Hardware	10-1
10.1.1	Interface connector	10-3
10.1.2	Programmable peripheral interface (PPI)	10-4
10.1.3	Line drivers	10-4

10.1.4	Line receivers	10-5
10.2	Theory of Operations	10-5
10.2.1	Sending and receiving data	10-5
10.2.2	Handshaking	10-6
10.3	Programmer Interface	10-7
10.3.1	Addressing the debugger interface	10-7
10.3.2	Programming the PPI	10-7
10.3.2.1	Operational descriptions and configurations	10-7
10.3.2.2	Initialization	10-7
10.3.2.3	Sending a byte	10-8
10.3.2.4	Receiving a byte	10-8
10.3.2.5	Sending boot (Reset) signal to debuggee machine	10-8
10.3.2.6	Sending an NMI signal	10-9
10.3.3	Timing	10-9

Addendum: Speaker

Appendices

Appendix A	Rigid Disk Subsystem Supplemental Information
Appendix B	Floppy Disk Controller Command Instruction Set
Appendix C	Documentation
Appendix D	Representative Schematics for the IOP Board (separate document)

LIST OF FIGURES

Section 1	1.1	Dove workstation block diagram	1-2
