# ATTENTION:

RE: Corvus Manual for CP/M Systems

Corvus Systems is presently working on a new Corvus Disk and
Network Systems Manual for CP/M based computers. Since this
manual has not yet been completed, you have received an earlier
version of the CP/M manual. This earlier version lacks photo-
graphs and hardware installation instructions. Therefore
Chapters 1 and 2 of the up-to-date Apple II manual are enclosed.
These two chapters are fairly universal for all Corvus disk
systems, multiplexers, and mirrors and contain good photographs
and hardware installation instructions.

Some differences, however, do exist between Corvus disk systems
and network products for different types of computers. CP/M
users should disregard the sections of Chapters 1 and 2 of the
Apple II manual which refer to the following:

> Omninet
> Constellation software
> Remote option of the Mirror

Be assured that you will receive a new Corvus Disk and Network
Systems Manual for CP/M based computers upon its completion at
no charge. However, in order to receive a new manual, you MUST
return a COMPLETED Warranty Registration Card to the attention
of the CP/M Product Manager at Corvus Systems.
