

# ARPANET DIRECTORY

MARCH 1982

Prepared for:  
DEFENSE COMMUNICATIONS AGENCY  
Washington, D.C. 20305  
On Contract No. DCA 200-81-C-0007

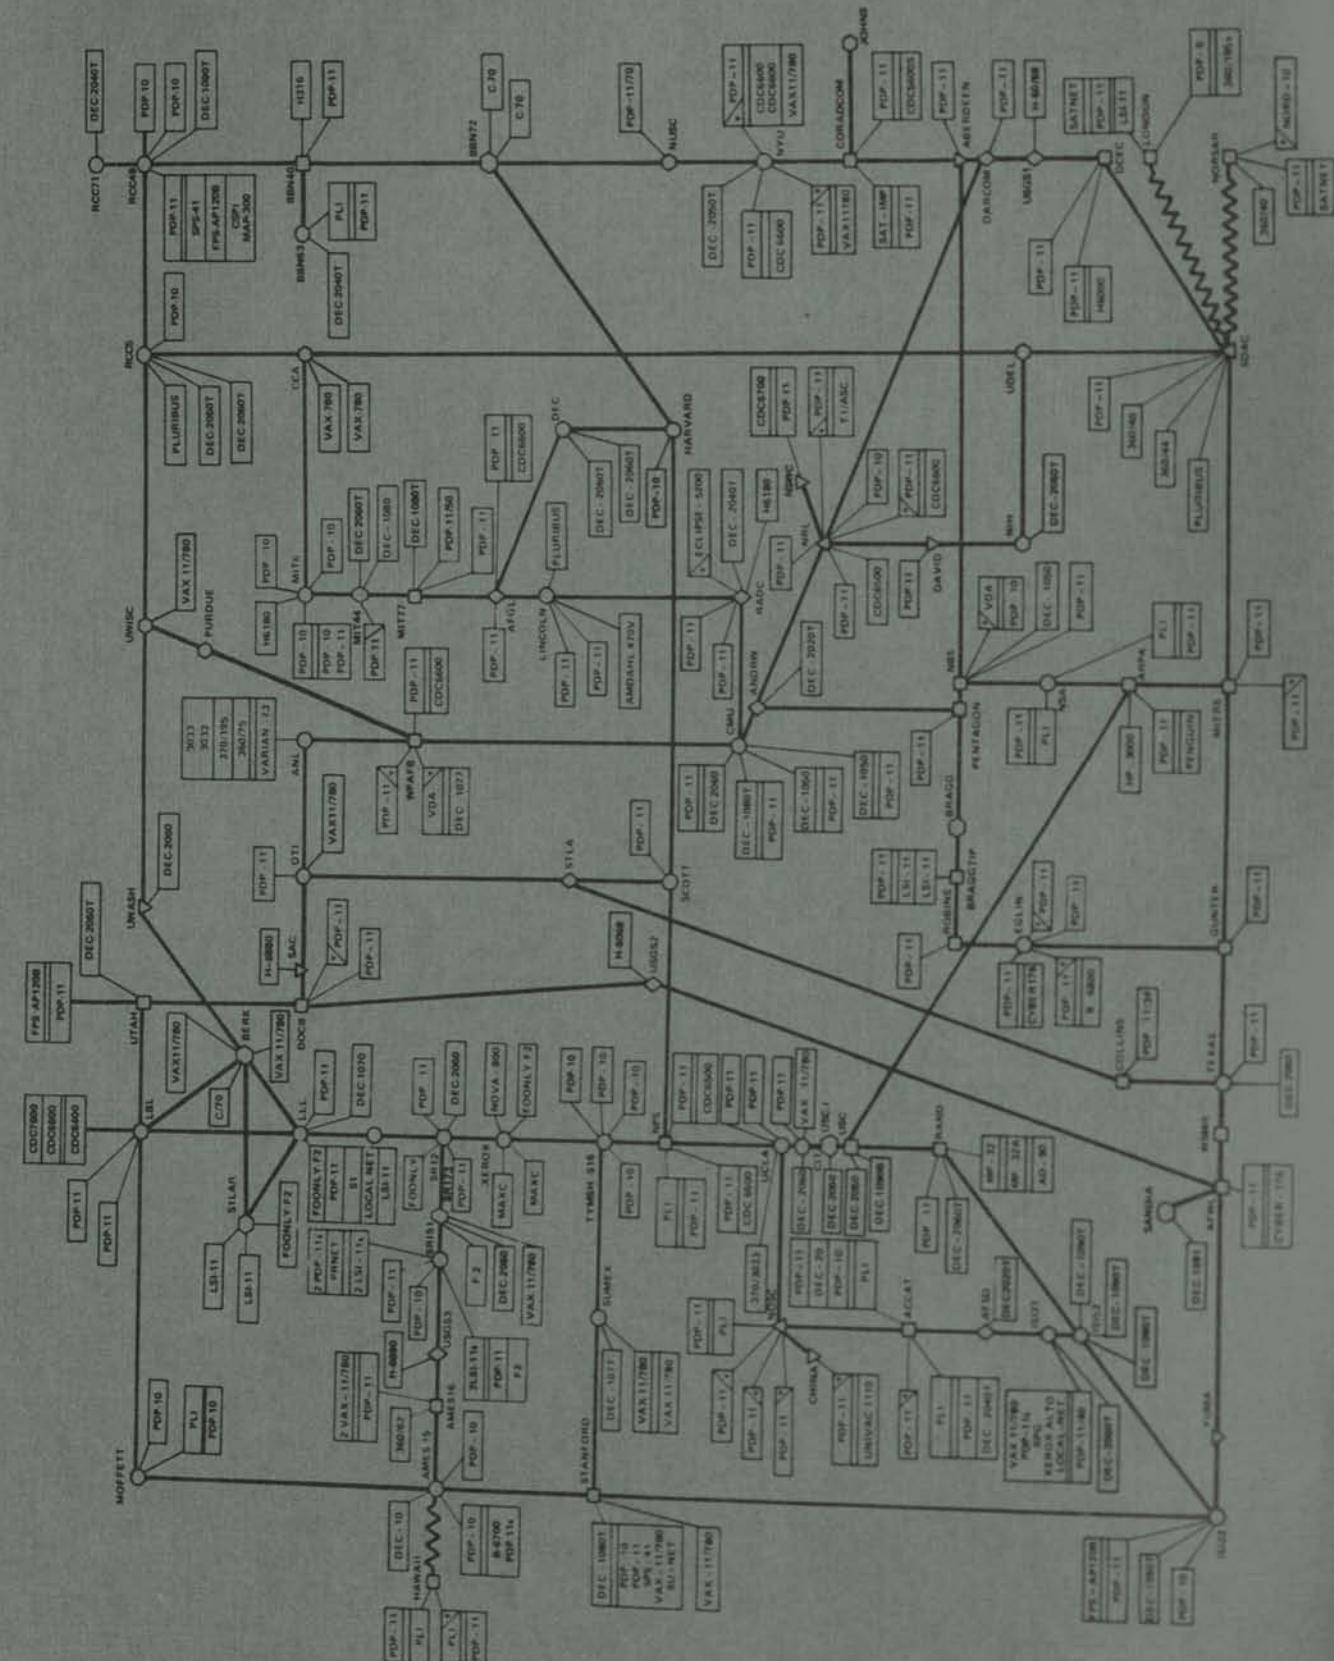

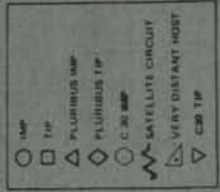

Produced and Published by:  
NETWORK INFORMATION CENTER  
SRI International  
Menlo Park, California 94025

# ARPANET LOGICAL MAP, DECEMBER 1981

PLEASE NOTE THAT WHILE THIS MAP SHOWS THE HOST POPULATION OF THE NETWORK ACCORDING TO THE BEST INFORMATION AVAILABLE, NO CLAIM CAN BE MADE FOR ITS ACCURACY.

HOST COMPUTER CONFIGURATION SUPPLIED BY THE NETWORK INFORMATION CENTER.

NAMES SHOWN ARE IMP NAMES, NOT (NECESSARILY) HOST NAMES.

This Directory was published by the ARPANET Network Information Center at SRI International, Menlo Park, CA., using Tymshare Corporation's AUGMENT system for text processing and formatting. Camera-ready copy was produced with a laser printer from Imagen Corporation, Los Altos, CA, and final printing was done by Data Composition, Inc., San Raphael, CA.

## DIRECTIONS FOR USE

Look for the year you want in the index at left. The number opposite each year is the number of the calendar to use for that year.

## BRIEF EXPLANATION OF THIS DIRECTORY

---

### ATTENTION

The ARPANET Directory is the property of the Department of Defense. It is to be used solely for the conduct of, or in support of, official U.S. government business. The use of this book or its data base for advertising, mail distribution lists, or for any other unauthorized purpose is strictly prohibited.

---

### NIC INFORMATION

Services and documents available from the Network Information Center (NIC) are described in this section of the Directory.

### ARPANET INFORMATION

General information, useful definitions, policies, and procedures for using the ARPANET are included in this section.

### CONTACTS

This section lists contacts for obtaining general network information. It also lists the ARPANET Sponsors and the ARPANET Liaison. (For a description of the function of each of these groups see the section on ARPANET Information.)

### INDIVIDUALS

Individuals who are authorized ARPANET users and who have supplied the proper information to the ARPANET Network Information Center are listed alphabetically by last name in the INDIVIDUALS section of the directory. The format is:

INDIVIDUAL'S NAME	NETWORK-MAIL-ADDRESS
HARDCOPY-MAIL-ADDRESS	PHONE NUMBER
	NIC IDENT

where

NETWORK-MAIL-ADDRESS is usually in the form: USER-NAME@HOST-NAME. The HOST NAME portion identifies a computer (host) attached to the ARPANET at which the individual receives delivery of his network mail. The USER-NAME portion of the network mail address is the character sequence by which that host identifies the user's incoming mail.

NIC IDENT = a unique code (usually one's initials) by which the NIC Identification system recognizes and locates an individual.

## INTRODUCTION

### NETWORK MAILBOX INDEX

This index is organized alphabetically by network mailbox along with the corresponding individual's name. It indicates what individuals are associated with which mailboxes, and is useful for identifying users of group mailboxes.

### NETWORK AND ASSOCIATE ORGANIZATIONS

Hosts are computers connected to the ARPANET. The organizations at which these computers are located are referred to as network organizations. Each host on the ARPANET has a host name acronym which often indicates the organization at which the host is located and gives other information about that host, e.g., SRI-AI is a host located at the SRI International Artificial Intelligence Center used for artificial intelligence research. Associate organizations are organizations that may have users on the ARPANET but do not have hosts connected to the ARPANET. Host and associate acronyms are listed by host acronym in the format:

OFFICIAL HOST NAME

ORGANIZATION NAME  
ORGANIZATION ADDRESS

or by associate acronym in the format:

ASSOCIATE ACRONYM

ORGANIZATION NAME  
ORGANIZATION ADDRESS

and by organization name in the format:

ORGANIZATION NAME      OFFICIAL HOST NAME or ASSOCIATE ACRONYM  
ORGANIZATION ADDRESS

where

OFFICIAL HOST NAME = a unique acronym, obtained through negotiation with the NIC, by which the organization is known on the ARPANET.

ASSOCIATE IDENT = an identification acronym for associate organizations, assigned by the NIC, by which hosts are known on the ARPANET.

### HOST NUMBER/IMP NUMBER ASSIGNMENTS

The Host No./IMP No. Table indicates which hosts are attached to each IMP or TIP. Host addressing conventions are in transition at this time, so both old and new addresses are included in this table. See RFCs 796 and 810 for an explanation of the new addressing conventions.

### COMPUTERS

The Computer Tables show what computers are in use on the ARPANET. The three separate tables are organized by host name, host address, and computer manufacturer. The first two tables indicate the configuration, if more than one computer is accessible via the ARPANET, or if the host computer is a front-end to another machine or machines. The representation scheme is approximate, and does not necessarily include all the internetwork connections.

HOSTS BY LOCATION

This table organizes hosts, including TIPs and TACs, by their geographic location. The exact location of any host can be checked by looking the host name acronym up in the Host Acronyms section of the Directory. Note: The NIC does not provide TIP or TAC access phone numbers to ARPANET users. Users needing these numbers should request them from the TIP or TAC Liaison listed in the Network Liaison section.

It is located at SRI International in Menlo Park, California, and is funded by the Defense Communications Agency (DCA), Code 332, to provide the services and publications outlined below.

PUBLICATIONS

The Network Information Center publishes the following documents:

The ARPANET DIRECTORY - A directory of sites and hosts on the ARPANET which includes the name, call sign, US mail address, phone number, and host affiliation of ARPANET users, as well as useful ARPANET contacts and necessary tables of host information.

The ARPANET PROTOCOL HANDBOOK - A collection of current ARPANET, Internet, and DoD network communication protocols.

The ARPANET RESOURCE HANDBOOK - A compilation of the resources available on the ARPANET.

The ARPANET NETWORK NEWSLETTER - A quarterly distributed journal by the NIC, on behalf of DCA, to liaisons, sponsors, and other interested people. The Network Newsletter is primarily concerned with official policy announcements or operational changes affecting the ARPANET. It also contains items of general network interest.

NOTE: ARPANET users who wish to receive the Network Newsletter should send a message to NIC@NIC (49000) asking to be put on the distribution list. The Network Newsletter is not published in hardcopy.

ONLINE REFERENCE FILES AND SERVICES

THE OFFICIAL ARPANET HOST NAME TABLE

An ASCII sequential file available from NIC (49000) as  
-NETINFO-HOSTS.TXT

This file contains the official list of host names and host addresses for hosts connected to the ARPANET. It contains host names, host address, host category, if any, and other host attributes as specified in RFC 881. It is accessible to any ARPANET user via FTP using USERNAME 'anonymous' and PASSWORD 'guest', and may also be accessed via the NIC Host Name Server (described below). The table is machine-readable and is strictly used to update local host name recognition tables.

NIC HOST NAME SERVER

As of June 1982 the NIC will provide an Internet Host Name Server on the NIC (49000), TCP socket 101 destined for RJE, or TCP port 101 destined. This server will deliver machine-readable host name/address/attribute information describing networks, gateways, hosts, and eventually domains, within the ARPANET/Internet environment. The server will deliver a single response to the entire host table, depending upon the type of query sent. The server provides the information outlined in the DoD Internet Host Table Specification, RFC 881, and is itself described in RFC 881.

ARABNET DIRECTORY  
NIC FORM 444c 1982

HOUSING BY LOCATION

The following information is provided for the use of the user in locating the location of the host. The NIC does not guarantee the accuracy of the information provided. The user is advised to contact the host directly for more information. The NIC does not guarantee the accuracy of the information provided. The user is advised to contact the host directly for more information.

## NETWORK INFORMATION CENTER SERVICES

### WHAT THE NETWORK INFORMATION CENTER (NIC) DOES

The NIC serves as a center for collection and dissemination of information about the ARPANET. It is located at SRI International in Menlo Park, California, and is funded by the Defense Communications Agency (DCA), Code 252, to provide the services and publications outlined below.

### PUBLICATIONS

The Network Information Center publishes the following documents:

**The ARPANET DIRECTORY** - A directory of users and hosts on the ARPANET which includes the names, online and U.S. mail addresses, phone number, and host affiliation of ARPANET users, as well as useful ARPANET contacts and summary tables of host information.

**The ARPANET PROTOCOL HANDBOOK** - A collection of current ARPANET, Internet, and DoD network communication protocols.

**The ARPANET RESOURCE HANDBOOK** - a compendium of the resources available on the ARPANET.

**The ARPANET NETWORK NEWSLETTER** - A newsletter distributed online by the NIC on behalf of DCA to Liaison, Sponsors, and other interested people. The Network Newsletter is primarily concerned with official policy announcements or operational changes affecting the ARPANET. It also contains items of general network interest.

**NOTE:** ARPANET users who wish to receive the Network Newsletter online, should send a message to NIC@SRI-NIC (10.0.0.73) asking to be put on the distribution list. The Network Newsletter is not published in hardcopy.

### ONLINE REFERENCE FILES AND SERVICES

#### THE OFFICIAL ARPANET HOST NAMES TABLE

An ASCII sequential file available from SRI-NIC (10.0.0.73) as  
<NETINFO>HOSTS.TXT

This file contains the official list of host names and host addresses for hosts attached to the ARPANET. It consists of host name, host address, host nickname, if any, and other host attributes as specified in RFC 810. It is accessible to any network user via FTP using USERNAME 'anonymous' and PASSWORD 'guest', and may also be accessed via the NIC Host Name Server (described below). The table is machine translatable and is mainly used to update local host name recognition tables.

#### NIC HOST NAME SERVER

As of June 1982 the NIC will provide an Internet Host Name Server on SRI-NIC (10.0.0.73), NCP socket 101 decimal for ICP, or TCP port 101 decimal. This server will deliver machine-translatable host name/address/attribute information describing networks, gateways, hosts, and eventually domains, within the ARPANET/Internet environment. The server can deliver a single response or the entire host table, depending upon the type of query sent. The server provides the information outlined in the DoD Internet Host Table Specification, RFC 810, and is itself described in RFC 811.

## NIC INFORMATION

### THE OFFICIAL ARPANET LIAISON LIST

An ASCII sequential file available from SRI-NIC (10.0.0.73) as  
<NETINFO>LIAISON.TXT

Each host on the ARPANET has a contact known as the Network Liaison. The Liaison.txt file contains the name, U. S. mail address, network mailbox, phone, and host affiliation for each Network Liaison. It also lists the sponsoring agency for each host. This file may be FTPed from the directory <NETINFO> to a local ARPANET host using USERNAME 'anonymous' and PASSWORD 'guest'.

### THE LIAISON NETWORK MAIL DISTRIBUTION LIST

An ASCII sequential file available from SRI-NIC (10.0.0.73) as  
<NETINFO>LIAISON-SNDMSG.TXT

This file contains network mail addresses for all Network Liaison formatted for online group distribution of messages via most mail programs. This file may be FTPed from the directory <NETINFO> to a local ARPANET host using USERNAME 'anonymous' and PASSWORD 'guest'.

### REQUESTS FOR COMMENTS (RFCs)

ARPANET technical notes, known as Requests for Comments or RFCs, are available online in the directory <NETINFO> at SRI-NIC (10.0.0.73). Dr. Jon Postel (POSTEL@ISIF) is currently serving as Editor-in-Chief for the RFCs. To submit an RFC for publication contact POSTEL@ISIF. To be added to the notification list for new RFC announcements, contact NIC@SRI-NIC. Each RFC remains in <NETINFO> at the NIC for at least 21 days after which time it may be moved to the directory <RFC> on SRI-NIC or archived. RFCs may be FTPed from the directory <NETINFO> or <RFC> to a local ARPANET host using USERNAME 'anonymous' and PASSWORD 'guest'. There is an online RFC Index in the file <NETINFO>RFC-INDEX.TXT on SRI-NIC. Contact NIC@SRI-NIC if you cannot locate a particular RFC online.

### INTERNET EXPERIMENT NOTES (IENS)

Internet Working Group technical notes, known as Internet Experiment Notes or IENs, are kept online in directory <NETINFO> at SRI-NIC (10.0.0.73). Older ones are in the directory <IEN> on SRI-NIC. Individuals wishing to be added to the IEN notification list or to submit an IEN for publication, should contact POSTEL@ISIF. Each IEN remains online at the NIC for at least 21 days to give users a chance to obtain copies. IENs may be FTPed from the directory <NETINFO> or <IEN> to a local ARPANET host using USERNAME 'anonymous' and PASSWORD 'guest'. There is an online IEN Index in the file <NETINFO>IEN-INDEX.TXT on SRI-NIC.

### NETWORK SPECIAL INTEREST GROUP (SIG) NOTES

The NIC is also a depository for many of the network special interest group notes, such as TCP/IP Digest, Info-VAX, and others. To be added to the distribution list for any network SIG, contact the SIG coordinator - the NIC does not control the SIG distribution lists. Check with the NIC if you are looking for back files of SIG documents. If we do not have them, we will attempt to direct you to the proper contact.

### NIC PROTOCOL REPOSITORY

During the coming year the NIC will be collecting information on ARPANET, Internet, DoD, and related protocols, including official specifications, obsolete versions, modifications, contacts, specific implementations, user access programs, architectures, models, and general folklore. Please send any contributions to NIC@SRI-NIC. If you do not know the right contact for questions about a particular protocol, contact NIC@SRI-NIC. We will attempt to point you to the proper contact or documentation, if known to us.

### NIC/QUERY

Most of the information contained in the ARPANET Resource Handbook is also available online as tree-structured files in the directory <NETINFO> at SRI-NIC (10.0.0.73). This information may be viewed through the NIC/QUERY program. The query program is designed for novice or casual users and is available to all ARPANET users. (See ACCESS TO NIC/QUERY below.)

### ACCESS TO NIC/QUERY

To access NIC/QUERY, connect to SRI-NIC (10.0.0.73) and type:

```
[@]nic <CR>
```

then follow the instructions that are printed out.

NOTE: Users may use this account for viewing reference files in the NIC/QUERY program only. It cannot be used to access other programs, to connect to other directories, or to link or send messages.

### WHOIS SERVER

All individuals with accounts on ARPANET machines, who are capable of passing traffic across the ARPANET, are requested by DCA to be registered in the NIC Identification data base. To add your name to this data base, send your full name, middle initial, U.S. mail address (i.e., your business address without abbreviations or acronyms and including mail stops), network mailbox, telephone, and network sponsor to NIC@SRI-NIC.

The NIC has implemented an ARPANET 'white-pages' server, called WHOIS, to deliver the data in the Identification data base to network users via a fast query/response transaction across the network. Hosts are urged to make this service available to their local users. See RFC 812 for a more detailed description of the WHOIS server.

### ACCESS TO WHOIS

To access WHOIS from a host on which WHOIS resides, login then type

```
whois LASTNAME <SP><CR>
```

To get help, type:

```
whois ? <CR>
```

Contact the local operator or user representative to see if WHOIS is available on your machine. The NIC can provide sample user access programs for TOPS20, TENEX, and UNIX operating systems on request.

**HARDCOPY DOCUMENT DISTRIBUTION**

The NIC maintains files of many hardcopy documents pertaining to the ARPANET. Although the NIC (since 1974) does not officially distribute hardcopy reprints to network users, it will attempt to honor Interlibrary Loan requests for items in the NIC collection that are not available in the open literature. This service is provided to the extent that funds and staff permit and is not guaranteed.

**CORRESPONDING WITH THE NIC**

Users are encouraged to correspond with the NIC concerning network information matters. If there is no entry in this Directory for you or your host, or if the entry is incorrect or should be removed, please let us know. Suggestions from users are welcome and will be considered within the constraints of a limited staff and budget.

To correspond with the NIC, use any one of the following methods of contact:

via network mail to        **NIC@SRI-NIC**

via U. S. mail to         Elizabeth Feinler, Manager  
ARPANET Network Information Center  
Room EJ221  
SRI International  
Menlo Park, California 94025

via phone to             (415) 859-3695

via Telex to             334463

**NOTE: ARPANET network mail is preferred.**

## ARPANET GENERAL INFORMATION

### USEFUL DEFINITIONS

#### INTERFACE MESSAGE PROCESSOR (IMP)

A store and forward packet switch which can accommodate up to four host computers. The original IMPs and TIPs were Honeywell 316 and 516 machines. The 316 and 516 IMPs/TIPs are gradually being replaced by C/30 machines produced by Bolt Beranek and Newman, Inc. (BBN) for the Defense Communications Agency (DCA).

#### TERMINAL INTERFACE PROCESSOR (TIP)

A store and forward packet switch which can accommodate up to three host computers and 63 terminals. Each terminal may be either asynchronous or externally clocked, and may operate at speeds up to 2400 baud on input and 19.2 kilobaud on output. Some types of intelligent terminals are also supported.

#### TERMINAL ACCESS CONTROLLER (TAC)

A replacement for the TIP that is a standalone terminal controller attached to an IMP as a local or distant host. Several TACs may be attached to a single IMP thus providing an expanded capability for terminal access. The TAC is equipped with internet protocols, improved auto speed detect to higher baud rates, and increased character buffering for terminals. It can be combined with a private line interface (PLI) for secure terminal traffic and programmed for other functions.

#### HOST

A customer-owned computer which is connected to a host port on an IMP or TIP. Hosts may be categorized as:

**LOCAL HOST** - A host located within 30 feet of an IMP or TIP.

**DISTANT HOST** - A host which is more than 30 feet, but less than 2,000 feet, from an IMP or TIP.

**VERY DISTANT HOST** - A host which is located over 2,000 feet from an IMP or TIP and requires modems on its access line.

#### TERMINAL

A teletypewriter, CRT, or similar unit which is connected to a terminal port of a TIP.

#### INTERSWITCH TRUNKS

A circuit between packet switches (e.g., IMPs and TIPs) which is used to pass packets through the network.

#### ACCESS LINE

A circuit from a host computer or terminal to an IMP, TIP, or TAC. The circuit may be a local cable or a transmission facility requiring modems.

## ARPANET INFORMATION

### ARPANET BACKBONE

The switching nodes, interfaces, communication lines interconnecting the nodes, and the Network Operations Center (NOC). The backbone is also known as the communications subnet.

### SPONSOR

A MILDEP, DoD Agency, or other U. S. Government Agency which is responsible for an ARPANET user(s) and reimburses DCA for the ARPANET backbone costs.

### NODE

The packet switch; an IMP or TIP.

### WHAT THE ARPANET IS

The ARPANET is an operational, resource sharing, host-to-host network linking a wide variety of computers at DoD facilities and non-DoD research centers in continental United States, Hawaii, Norway, and England.

The ARPANET originated as a purely experimental network in late 1969 under a research and development program sponsored by DARPA to advance the state-of-the-art in computer networking. The network was designed to provide efficient communications between heterogeneous computers so that hardware, software, and data resources could be conveniently and economically shared by a wide community of users.

Today, the ARPANET provides support for a large number of DoD and non-DoD government projects with an operational network of many nodes and host computers.

Following the successful accomplishment of initial ARPANET design goals and the expansion of the network, it was considered appropriate to transfer the responsibility for operation of the ARPANET from DARPA to DCA. After July 1975, DCA became the operational manager of the ARPANET.

### BRIEF DESCRIPTION OF THE ARPANET

The ARPANET is an operational, computerized, packet switching DoD digital network which provides a capability for terminals or geographically separated computers, called hosts, to communicate with each other. The host computers often differ from one another in type, speed, word length, operating system, and other characteristics. Each terminal or host computer is connected into the network through a small local node computer called an IMP, TIP, or TAC. The complete network is formed by interconnecting the IMPs through wideband communication lines (normally 50,000 bits per second) supplied by common carriers.

Each node is programmed to receive and forward messages to neighboring nodes in the network. During a typical operation, a host passes a message to its node; the message is passed from node to node through the network until it finally arrives at the destination IMP, which in turn passes it along to the destination host. This process normally takes less than 250 milliseconds.

Hosts communicate with each other via regular messages. A regular message may vary in length from 96 to 8159 bits, the first 96 of which are control bits called the leader. The leader is also used for sending control messages between the host and its node. The remainder of the message is the data or text.

For each regular message, the host specifies a destination, consisting of node, host, and handling type. These three parameters uniquely specify a connection between source and destination hosts. The handling type gives the connection specific characteristics, such as priority or non-priority transmission. Additional leader space has been reserved for a fourth parameter, used for internetwork addressing. For each connection, messages are delivered to the destination in the same order that they were transmitted by the source.

For each regular message, the host also specifies a 12-bit identifier, the message-ID. The message-ID, together with the destination of the message, is used as the "name" of the message. The node uses this name to inform the host of the disposition of the message. Therefore, if the host refrains from re-using a particular message-ID value (to a given destination) until the node has responded about that message-ID, messages will remain uniquely identified and the host can retransmit them in the event of a failure within the network.

After receiving a regular message from a host connected to it, a node breaks the message into several packets (currently the maximum data bits per packet is 1008) and passes these through the network in the direction of the destination. Eventually, when all packets arrive at the destination, they are reassembled to form the original message which is passed to the destination host. The destination node returns a positive acknowledgment for receipt of the message to the source host. This acknowledgment is called a Ready for Next Message (RFNM) and identifies the message being acknowledged by name. In some relatively rare cases, however, the message may not be delivered due to a node failure; line disruption, etc., in such cases an Incomplete Transmission message will be returned to the source host instead of a RFNM. In this case the message which was incompletely transmitted is also identified by name.

If a response from the destination node (either RFNM or Incomplete Transmission) is not delivered to the originating host, this condition will be detected by the source node, which will automatically inquire of the destination node whether the original message was correctly received and repeat the inquiry until a response is received from the destination node. This inquiry mechanism is timeout-driven, and each timeout period may vary between 30 and 45 seconds in length.

When a message arrives at its destination node, the leader is modified to indicate the source host, but the message-ID field is passed through unchanged. Thus, in addition to providing message identification between a host and its local node, the message-ID can provide a means for hosts to identify messages between themselves.

Users of the ARPANET may access local or distant SERVER computers (hosts) over the network. They may also exchange messages, create realtime links between users, transfer files from one computer to another, and submit batch jobs to distant computers. For a more complete description of these processes, see the ARPANET Protocol Handbook available from the NIC.

## MANAGEMENT OF THE ARPANET

The Director, DCA controls system engineering and exercises operational direction over those operating elements of ARPANET which are part of the backbone. ARPANET user equipment and terminals are non-backbone. ARPANET users must be responsive to management instructions issued by the DCA regarding the ARPANET.

DCA will monitor the effectiveness of the ARPANET on a continuing basis, evaluate those matters which have major impact or will impact adversely on the network, and direct action to alleviate or prevent any problems.

## ARPANET INFORMATION

ARPANET DIRECTORY  
NIC 4800 Mar 1981

### ARPANET responsibilities of DCA are

- . To set policies, procedures, and standards for the operation and maintenance of the ARPANET.
- . To lease the backbone and terminal access circuits
- . To maintain the backbone hardware
- . To approve changes in the network
- . To set user access criteria
- . To plan, program, and budget for the resources
- . To protect government assets
- . To provide configuration control
- . To coordinate activities impacting the network
- . To act as Chairman of the Network Sponsors Group
- . To evaluate the performance of the network
- . To carry out topology studies
- . To support the Network Information Center (NIC) and the Network Operations Control (NOC)
- . To collect performance statistics

### ARPANET POLICIES

The ARPANET is an operational DoD network and is not intended to compete with comparable commercial service. Accordingly, before ARPANET service is provided to any non-U.S. Government activity, it must be determined that adequate commercial service is not available.

The ARPANET is intended to be used solely for the conduct of or in support of official U.S. Government business. The proposed use of the ARPANET must not violate applicable privacy laws.

All orders for communications lines (including VDH lines) will be placed through DCA Code 252 with the Defense Commercial Communications Office (DECCO), and appropriate charges will be billed to the sponsoring activity.

Host equipment, host interface hardware and software, host-to-IMP communications and site preparation are the responsibility of the user.

For testing new concepts and developments in data communications and computer networking, interconnection of the ARPANET with other networks is authorized. DCA elements, DARPA, and others will coordinate these plans with DCA Code 252.

## GENERAL SERVICES ADMINISTRATION TELEPROCESSING SERVICES PROGRAM POLICY

The General Services Administration (GSA) has established the Teleprocessing Services Program (TSP) to insure that teleprocessing services are acquired in the best way from the government standpoint. While the TSP does not apply to equipment for an experiment that is a part of the ARPANET, GSA has stated that user selection, contracting, and ordering of data processing services via the ARPANET must be in accordance with FPMR 101-32, in general, and Temporary Regulation E-47 (TSP) in particular. Unless a company on the ARPANET is registered with the TSP program, an agency desiring to use that contractor will require a sole source justification and a waiver of the TSP program from GSA.

### WHO MAY BE A SUBSCRIBER ON THE ARPANET

#### DOD USERS

Subject to the availability of assets, DoD activities will be connected to the ARPANET provided the requests are processed through normal communications validating channels.

#### NON-DOD U.S. GOVERNMENT ACTIVITIES

Non-DoD U.S. Government activities requesting ARPANET service must apply to the Director, Defense Communications Agency, ATTN: ARPANET Management Branch, Code 252, Washington, D.C. 20305. Requests will be considered by DCA on a case-by-case basis.

#### NON-GOVERNMENT U. S. ACTIVITIES

A non-government activity must have a U.S. Government activity acting as a sponsor. Application for service on the ARPANET must be submitted by the sponsoring activity to Directory, Defense Communications Agency, ATTN: ARPANET Management Branch, Code 252. The application must clearly state how the proposed service is in the best interest of the U.S. Government, is essential to mission fulfillment, does not violate privacy laws, and why adequate commercial service is not available. The contract number of the contract between the sponsoring activity and the non-government activity requiring access to the ARPANET may be requested.

#### NON-U. S. ACTIVITIES

Non-U. S. activities will not be directly connected to the ARPANET. Access to the ARPANET may be provided through the facilities of an authorized user if coordinated with DCA.

### NEW ARPANET SERVICE

Activities wishing to join the ARPANET that are qualified in accordance with the utilization policy, should contact DCA Code 252 (DCACODE252@ISI).

If terminal service only is required, two connections are possible:

- . Hardwire to a TIP
- . Dial-in to a TIP

## ARPANET INFORMATION

If host service is required, three connections are possible:

LOCAL HOST (within 30 feet of the IMP or TIP).

DISTANT HOST (30 feet to 2000 feet).

VERY DISTANT HOST (over 2000 feet). (May also require an increase in memory of the connected IMP).

Steps to be taken and costs involved depend to a large extent on the present configuration of the net and the location of the new user and the service desired. For example, assume that an activity in the Washington, D.C. area wants to bring a host onto the ARPANET. A request would be sent for service to DCA who would in turn determine which node(s) in the area had the capacity to accommodate the requirement. DCA would then advise the requestor to obtain permission for a host connection from the owner of that node. If the node owner will allow the connection, the requestor must reach an agreement with him on length of service and cost reimbursement for the host port access.

If no host ports are available, the requestor would need to purchase a new IMP through DCA Code 252. Normally the requestor would submit his requirement to DCA who would then process it through its supporting contracting office. Prices are available upon request from DCA Code 252.

Each application for service will be submitted in accordance with Chapter 3 of DCA Circular 310-130-1. This circular may be obtained from Headquarters, Defense Communications Agency, Code 510.

Requirements for wideband (50 KBPS and above) circuits must be submitted at least 6 months in advance to give the contractor facility upgrading and circuit engineering time. All other requests for circuit leasing actions must be submitted 90 days prior to the required service date to allow sufficient time for leasing actions.

### ACCESS CONTROL

It is the duty of the Sponsors to insure that only authorized users are allowed access to hosts through network nodes. Name, U.S. mail address, network mailbox, and phone should be on record with the NIC for each network user.

To effectively enforce access control, the Sponsors must have:

STANDARDS - to insure that only validated accounts are established for users.

ACCESS CONTROLS - to insure that only valid users can access the host - login/password mechanisms are satisfactory

PERIODIC REVIEWS - to insure that users, who no longer require access, are removed from the net.

When abuse of this policy is noted, DCA Code 252 will notify the host administrator. If no action is taken DCA will then contact the Sponsor for corrective action. If corrective action is not taken in a reasonable time, DCA reserves the right to disconnect the host/terminal from the network.

All dial-up modems will have a telephone number change at least once a year. The TIP or TAC Sponsor is responsible for taking prudent actions to maintain the privacy of the numbers.

The IMPs, TIPs, and TACs are owned by the Sponsors and, once integrated into the ARPANET, are controlled and maintained by DCA. The IMP/TIP/TAC owners have assignment control authority over the ports on their equipment (within limits established by ARPANET policies). Owners pay for all relocation and installation costs related to their hardware.

### ARPANET SOFTWARE MODIFICATIONS

There are two general procedures for software modifications: 1) patches to correct deficiencies (bugs) in the operating program, 2) changes which are identified and approved for implementation. Software changes are tested and debugged at BBN prior to release. The software change releases are scheduled for testing and implementation on Tuesdays between 0700 and 0900 Boston time.

To insure that users are fully aware of major software changes which may affect their operations, the changes will be processed in the following manner:

- . A specification will be developed for each approved program change proposal.
- . For those program changes viewed as having potential impact on the users, the specifications will be coordinated with the user prior to coding.
- . Subsequently, a Software Release Notice (SRN) will be distributed to all users as far in advance as possible but not less than 30 days prior to implementation (emergency changes excepted). The SRN will provide the data required to users to adjust to the system change being implemented.

### THE NETWORK OPERATIONS CENTER (NOC)

The Network Operations Center (NOC) for the ARPANET is primarily concerned with the detection of node or line failures. In addition, the NOC monitors volumes of host traffic and line traffic which can give advance warning of network elements whose capacity may need to be increased and which can also be used for site usage accounting.

The NOC maintains other data, such as sense switches, auto restart, memory protect settings, etc., and buffer usage for each node machine. This data is helpful in diagnosing node failures. Due to the constant monitoring of the ARPANET at the NOC, the operational availability of the network is very high (consistently in excess of 99%).

The NOC is located in Cambridge, Massachusetts and is operated by BBN under contract to the DCA. (See also CONTACTS section.)

### THE ARPANET SPONSORS GROUP

The ARPANET Sponsors Group is made up of representatives from the various DoD or U.S. Government Agencies that support the ARPANET. (See CONTACTS, ARPANET Sponsors, for a list of network sponsors.) The group considers and makes recommendations to DCA on operational activities and services available on the ARPANET. It also serves as a forum for the exchange of ideas and information on the operation of the ARPANET and of future plans for the network of common interest to its sponsors.

The Sponsors Group normally meets semiannually. Special meetings may be called by the Chairman, if the situation warrants it, prior to the next regularly scheduled meeting. Meetings normally are held in the Washington, D. C. area, but may be held at other locations.

## ARPANET INFORMATION

### Responsibilities of an ARPANET Sponsor are

- . To process all node and associated hardware requirements through Mildep or agency channels to DCA Code 252 for procurement.
- . To process via DCA Code 252 all requests for access lines, host interfaces, circuit rearrangements, and equipment moves.
- . To review for approval/disapproval requests for connection by other sponsors or government agencies, of hosts/terminals to nodes under his control.
- . To insure that all hosts have well-defined access control procedures and standards to prevent unauthorized use. Periodically have host accounts reviewed for removal of unauthorized users.
- . To insure that TIP or TAC liaisons change Dial-In-Modem numbers as scheduled by DCA Code 252.
- . To see that the Network Liaison promptly report host/terminal connection changes as they occur to the NIC and the NOC.
- . To inform their nodes of ARPANET policies as published in the Sponsors Group Minutes, DCA correspondence, and Network Newsletter.
- . To inform DCA Code 252 of any significant continuing network problems, and file Unsatisfactory Service Reports (USRs) to DCA Code 252 with copies to BBN as necessary.
- . To attend the semiannual ARPANET Sponsors Group Meetings to present problems, define user needs, make recommendations for change in policy, and discuss related network matters.
- . To validate requirements for distribution of ARPANET documentation.

### THE ARPANET TECHNICAL LIAISON

The ARPANET Technical Liaison act as advisors to network users, the Network Information Center (NIC), the Network Operations Center (NOC), and the Defense Communications Agency (DCA) on technical matters relating to the ARPANET. The liaison are the chief source of information about individual ARPANET hosts. They often contribute to the design of network protocols and related software and make suggestions for needed changes and improvements through memos, RFCs (network technical notes), and participation in network working groups. The liaison are a valuable network resource and the first point of contact for most ARPANET users.

The liaison are traditionally individuals trained in computer science, telecommunications, or a related field, and are familiar with the resources available at the hosts they represent. Each host on the network has no more than one technical liaison; however, the same person may serve as liaison for more than one host. The technical liaison are coordinated by the Manager of the ARPANET Network Information Center, currently Elizabeth Feinler (FEINLER@SRI-NIC).

Responsibilities of an ARPANET Liaison are:

The primary responsibilities of the liaison are to help monitor the ARPANET against unauthorized use and to provide assistance and guidelines to ARPANET users. The liaison is frequently the first person approached by potential ARPANET users, or the first person to become aware of unauthorized use of network resources. Liaison are expected to adhere to the following guidelines and procedures in carrying out these responsibilities:

**ATTACHING HOSTS OR TERMINALS TO THE ARPANET** - Permission to connect hosts or terminals to the ARPANET can only be granted by a sponsoring agency through DCA. The liaison or host administrator should obtain permission to occupy a host port from the ARPANET sponsor of the node to which a host or terminal is to be connected. The node in question may belong to a sponsor other than the one sponsoring the work to be done on the host or terminal to be connected. If this is the case, approval must be obtained from the controlling sponsor who will determine whether the requirement is valid, the port is free, and the resources are available to support the interface. The controlling sponsor will in turn submit a request to initiate the connection to DCA. Only after all of these permissions are obtained may a host or terminal be added or changed on an IMP, TIP, or TAC. The liaison should inform any individuals at their facilities who may wish to connect hosts or terminals to the ARPANET, of this procedure.

**PROVIDING HOST INFORMATION TO THE NIC AND DCA** - Upon completion of the host installation and prior to the host passing traffic, the liaison must contact DCA Code 252 (DCACODE252@ISI) via the ARPANET for final validation.

DCA will then instruct BBN to set the IMP's host access permission words to allow traffic to pass to and from the host. Before this validation can occur, the host liaison must provide the NIC and DCA Code 252 via ARPANET with his or her full name, U.S. mailing address, phone number, and network mailbox (if this has not already been done), as well as the host name, host address, operating system, computer configuration, and network sponsor for the newly installed host. **NOTE:** Please choose the host name carefully so that it does not need to be changed. Unnecessary host name changes create confusion and require considerable extra data maintenance throughout the network.

**AUTHORIZING USERS FOR ARPANET ACCESS** - Permission to use the ARPANET can only be granted by authorized host administrators to users with valid accounts. The liaison should refer all requests for such access to the proper administrators or the principal investigators of government contracts before permitting a user to access the ARPANET. ARPANET users must provide the NIC with their name, address, phone number and network mailbox. This information will be used to produce the ARPANET Directory and will be listed in the NIC's ARPANET Identification Data Base. Liaison should periodically review accounts with ARPANET access. Users whose access to the ARPANET is no longer required or valid should be removed, and the NIC should be so informed.

The host account administrator or principal investigator is required to validate his users or contractors, and to see that the NIC is informed of any changes either directly or through the host liaison. The host liaison will inform all local account administrators or principal investigators of this procedure and assist them in keeping the user information updated. If, after following this procedure, there are still doubts about whether a user can have ARPANET access, contact DCA Code 252 for final arbitration. **NOTE:** If an individual has not been approved by the proper administrator and has not been listed in the NIC data base, he or she should not be using the ARPANET. All unauthorized use of the ARPANET is prohibited.

**MONITORING GATEWAY ACCESS** - If it is possible to gain access to the ARPANET from another network (gateway) or from a tributary terminal of a host via the IMP-host connection, it is the responsibility of that host to provide software protection which will permit only authorized ARPANET users to access the network. These interfaces must be documented by letter to DCA for approval. The letter should provide a brief description of the interface, who uses it, and the software and/or hardware protection mechanism. DCA reserves the right to disapprove such gateways. The liaison should inform administrators of local or 'foreign' networks, who might wish to establish gateway connections to the ARPANET, of this procedure, and disallow any gateway access until it has been approved.

**DISTRIBUTING TIP PHONE NUMBERS** - Distribution of TIP dial-in numbers is entrusted to the TIP liaison. These numbers should not be released to requesting users unless the release has been authorized by the TIP's sponsor. TIP numbers will be changed annually on a schedule published by DCA. Evidence of unauthorized use of these numbers should be reported to DCA. The liaison should emphasize to the user when providing the dial-in number, that the number is for his use alone. If it is found that the user has passed the number to unauthorized parties, the user's access rights may be revoked.

**AUTHORIZING DEDICATED TIP PORTS** - Prior to a TIP port being activated to support a dedicated terminal access, the TIP liaison should contact DCA for final validation. The request should include the desired activation date so that DCA can request that the NOC enable the TIP port on that date.

In addition to the above, the liaison help to coordinate equipment moves or installations, or circuit moves or installations affecting the ARPANET backbone or the nodes. Info copies of Telecommunications Service Requests (TSR's) will be sent to the liaison from DCA, informing them of any changes in backbone circuitry, terminal and/or host additions/deletions. The liaison should help coordinate access to the IMP, TIP, or TAC by TEL CO or BBN to perform actions called for in the TSRs. Unless a TSR has been received authorizing equipment moves/installations or circuit moves/additions, no such moves or installations should be made without contacting DCA Code 252 for authorization. Normal maintenance actions are excluded. NOTE: Liaison for hosts/TIPs/TACs on Army installations should be aware that circuit changes/connections must be coordinated with the U.S. Army Communications Command (USACC) and copies of TSRs provided to the post C-E officer.

On the first of each month the NIC will provide, via the ARPANET, a list of ARPANET Host Names, Liaison, and Sponsors. Liaison will be asked to review entries on this list pertaining to their hosts for accuracy, and to provide changes as soon as possible to the NIC. If liaison are changed, the old liaison should provide the name, address, telephone number, and network mailbox of the new liaison to both the NIC and DCA Code 252 as soon as possible.

Each liaison is expected to provide the NIC with a description of equipment, software, contacts, and interests pertaining to his designated hosts in accordance with the formats outlined by the NIC.

In addition each liaison is responsible for notifying the NIC each time a user is added or removed from the ARPANET. This may be done in coordination with sponsors, host administrators, principal investigators, and individual users.

For very large organizations this activity may be delegated to an individual other than the liaison. Also, individual users may send their own information via the network to the NIC@SRI-NIC. However, it is the responsibility of the liaison to coordinate the flow of this information from his or her host(s) to the NIC and to see that users on the network are authorized.

The liaison is expected to keep local users informed about procedures and happenings related to the ARPANET (such as announcements in the ARPANET Newsletter). The Liaison will be the recipient of official messages pertaining to the ARPANET. These messages should be 'posted' and/or passed on by the Liaison to local users, administrators, or other personnel who may have an interest or a need to know. Unless otherwise specified, messages sent to the liaison are considered general information messages which may be widely distributed to user and administrative constituencies.

The liaison serve as the local ARPANET contact for their respective host(s). The liaison provide information to their local users about ARPANET procedures, and they also provide information to non-local ARPANET users about local host procedures and resources. They often assist in bringing up new hosts by providing network software and folklore. The liaison can either provide help directly or refer users to the proper contact. Requests by users for information about other ARPANET hosts may be referred to the liaison of the host in question or to the NIC. (As a rule of thumb the NIC answers general questions about contacts, procedures, and resources on the ARPANET, and the liaison answer specific questions about their own hosts and software.)

Liaison should inform the NOC and DCA of network backbone problems and network software bugs, and generate Unsatisfactory Service Reports if necessary. They see that ARPANET protocols are implemented properly at the host level. (This activity may be delegated if the liaison is not the maintainer of the network software. However, the liaison is expected to be the contact for protocol information distributed to the hosts and to see that the right person receives it.)

If an illegal access to the host occurs through the ARPANET, the liaison will advise DCA of the pertinent details in addition to following normal host security procedures.

#### FUNDING OPERATION AND TRAFFIC

The operation and maintenance (O&M) of the ARPANET backbone, i.e., nodes, interfaces, and internode communications circuits, are paid for through the Communications Services Industrial Fund (CSIF) which is managed and operated by the Defense Communications Agency. The Defense Commercial Communications Office (DECCO) has responsibility for all leasing actions which take place under the CSIF. This function includes normal contract management activities for the ARPANET. All bills for the CSIF portion of the ARPANET are paid by DECCO. Audits of contractors are performed by the Defense Contract Audit Agency (DCAA) at the request of DECCO. The vehicle used to request communication services is the ARPANET TSR which is forwarded to DECCO from DCA Code 252 as the ARPANET manager. Under the working capital or revolving fund concept, predetermined subscriber rates are the basis for recovering the cost of operating and maintaining the backbone network.

The estimated cost to operate and maintain the ARPANET backbone during a fiscal year, divided by the estimated number of IMPs and TIPs in the network, provides the annual cost per year per node.

All ARPANET customer activities will be billed monthly based on a predetermined cost for each operational node in the backbone. Contact DCA Code 252 (DCACODE252@ISI) to obtain the current monthly rate.

POWERS@BEN-LINIX (Other mail)

## ARPANET INFORMATION

### SECURITY

The ARPANET communications subnet or 'backbone' contains no security features to insure privacy or the protection of classified defense information transiting the network. Therefore, it is the responsibility of sponsors and those operating hosts on the network to take steps to protect information resident or accessible through their host computers from access by unauthorized users, and to provide protection against unauthorized access to classified information which may reside or be accessible via their host computer link to the network.

There are no "login" procedures for initial network access. All access control is provided at the host level.

A secure subnet is possible by providing hosts with a Private Line Interface (PLI). The PLI has been approved by the National Security Agency (NSA). The user also has to provide a KG34. The PLI subnet can include up to 128 hosts constrained to 32 nodes. Contact DCA Code 252 for cost details.

### COMPLAINTS

A complaint center teletype is maintained at the NOC for users reporting problems or seeking assistance. Receiving and processing complaints is not purely an NOC function, thus an additional channel for reporting unsatisfactory service has been developed. The ARPANET Unsatisfactory Service Report (USR) has been established as the formal means of reporting deficiencies with respect to the operations of the ARPANET backbone communications.

Problems or complaints which cannot be resolved through normal channels should be reported by means of the USR. The types of problems to be included are, but are not limited to, the following:

- . Excessive response time
- . Inadequate restoral procedures
- . Unsatisfactory maintenance support

The User (Sponsor) must determine when service has reached an unsatisfactory point. The report may be sent over the ARPANET, AUTODIN, or by U.S. Mail. Reports should be addressed to DCA Code 252 with information copies to the NOC at BBN and any other activity as deemed appropriate by the originators. (See CONTACTS section for addresses.)

NOTE: At press time many changes were taking place in the ARPANET administration, protocols, and node hardware. Contact DCA Code 252, the NOC, or the NIC for further information. Also, watch the Network Newsletter for changes and announcements.

GENERAL NETWORK RESOURCE INFORMATION  
**GENERAL CONTACTS**

**TIP OR TAC PHONE NUMBERS**

The NIC does not provide TIP or TAC phone numbers to network users. Access to a TIP or TAC is at the discretion of the Sponsor and is not guaranteed. To obtain a phone number, contact the Liaison for the TIP or TAC to be accessed. (See the HOSTS BY LOCATION section for the geographic location of TIPs and TACs, and the NETWORK LIAISON section for a list of the Liaison.)

**ARPANET MANAGEMENT, POLICY, AND SERVICE**

Questions regarding general policy or access to the ARPANET or unsatisfactory ARPANET service should be sent to

Director, Defense Communications Agency (DCA)  
ATTN: ARPANET Management Branch, Maj. Glynn Parker  
Code 232  
Washington, D. C. 20305

(202) 692-6175 or 692-6176 (Commercial)  
222-6175 or 222-6176 (Autovon)  
DCACODE232@ISI (Online mail)

**NETWORK OPERATION AND TRAFFIC**

Technical questions concerning network operation and usage should be sent to

Network Operations Center (NOC)  
ATTN: James G. Herman  
Bolt Beranek and Newman, Inc.  
Cambridge, Massachusetts 02138

(617) 491-1850 ext 3117  
HERMAN@BBN-UNIX (Online mail)

**IMPS, TIPS, AND NETWORK LINE PROBLEMS**

Routine questions on IMP, TIP or TAC operation and network line problems should be sent to

Network Operations Center (NOC)  
ATTN: Jim Powers  
Bolt Beranek and Newman, Inc.  
Cambridge, Massachusetts 02138

19/9	19/010	...	...

The table is divided into two parts. The first part is organized by Host Name, Address and the second by Host Address. For a definition of host name acronym, see the HOST ACRONYM table.

For each host there is a description of the computer configuration for that host. The first computer mentioned for the description is attached to the IMS and is by definition the host computer. Other computers are attached to the host computer as indicated by the arrows.

NOTE: The configuration of machines on the ARABNET changes often, so this table automatically corrects itself. Also, the configuration indicated by the arrows is an approximate representation that shows the details on the network, local network, and gateway connections. Some connections or addresses are indicated.

ORGANIZED BY HOST NAME

HOST NAME	HOST ADDRESS	CONFIGURATION/OPERATING SYSTEM
