Description	Profile
Model	Model I
Stock No.	26-1562 Version 1.0
Date	June 10, 1980
Page 1 of	1

Problem

When using BASIC programs to update Profile data files there have been problems with 254 byte and 255 byte records.

Solution

Although Profile will span any record length, if you wish to use BASIC to access the files, the LRL must be a number evenly divisible into 256 minus one. This is stated on page 25. 254 is not a proper length. 255 byte records contain 255 bytes of data, the 256th byte contains a 0DHex (carriage return) in all cases. This is set by Profile.
