CUSTOMER SERVICE BULLETIN

Problem

The OTDR instruction assembles improperly with the Series I Editor
Assembler.

* *   THE FOLLOWING PATCH IS REQUIRED!   * *

Solution

The reference book used for checking the assembler had a typographical error
which caused the mistake. OTDR should assemble as "EDBB". The Series I
package assembles "ED8B" instead.

To correct the problem, apply the following patch to your EDTASM program:

PATCH EDTASM/CMD (ADD=6DE2,FIND=8B,CHG=BB)

Users who wish to correct the comment line in the SAMPLE/SRC should change
;ED8B to ;EDBB.
