### Problem

There is a problem when the original master disk is run and when you wish to re-initialize the system or change the parameters.

### Solution

If this problem occurs in the IMS system, the following must be done to clear out the system information. This should only be done in cases of is not a clean master available.

To re-initialize IMS, do the following:

1. At "TRSDOS Ready", type BASIC -F:3.
2. When BASIC has loaded, enter the following program :

```
10 CLEAR 1000
20 KILL "SALEDATA/DAT"
30 KILL "CONTROL/DAT"
40 OPEN "R",1,"CONTROL/DAT",96
50 FIELD 1, 96 AS X$
60 LSET X$ = STRING(96,0)
70 PUT 1,1
80 PUT 1,2
90 PUT 1,3
100 PUT 1,4
110 PUT 1,5
120 CLOSE
130 SYSTEM "IMS"
```

3. Then type RUN and press <ENTER>
4. Type SYSTEM to get to TRSDOS Ready and make a backup.
