Date	<u>July 28, 1980</u>
Page 1 of	<u>1</u>

### Problem

When recording hand written checks, the system does no calculations for you, so if an error is made it throws the system off.

### Solution

If the customer wants the system to calculate some of the figures for them then prepare checks and run update instead of using the record - handwritten checks. After preparing checks the customer should not print checks but go straight through to update.
