Problem

When attempting to add records to an indexed or relative file, Cobol improperly handles a disk full condition (error 24). The indices of indexed files are improperly changed. As a consequence, the next attempt to write a record produces an invalid index error (error 98).

At this point, the user can only revert to his most recent back-up copy, because the invalidated file cannot be recovered.

Solution

At TRSDOS READY, apply the following patches to correct the above problem.

PATCH RUNCOBOL A=761D F=3Ø14FD7Ø71FD7170Ø21 C=DØ21250Ø019EB3E2CCF
