USING THE MARION COUNTY DIRECTORY OF RADIO AMATEURS

This directory was prepared with the consideration that the directory should be usable with ease and legibility. The usual ham abbreviations have been used to conserve space and the abbreviation "HB" has been used to denote the "homebrew" equipment. Immediately under the call letters of most of the listings will be found the main band and mode of operation that that particular station uses. In the event that a station operates about equally on two or more bands, the first band listed in the survey forms were considered to be the one band used most, for directory purposes.

Due to rather severe space limitations, much of the material that was received on the survey forms was not able to be included in the directory. Each station was allowed a maximum of two lines in the directory; many stations have enough information to fill two pages! The most important facts were used as the space permitted.

Original plans for the directory included a listing of the Marion County Amateur Radio Clubs, mobile stations, VHF stations, and the bands that were used most. However, it was necessary to eliminate these listings due to the postal regulations for third class mail weight limitations.

The Indianapolis Radio Club, Incorporated and its individual members assume no responsibility as to the validity, accuracy or completeness of this directory. Although care was taken to make the directory as accurate as possible, many errors, omissions, etc are common in this type of publication. Corrections should be submitted to the Editor in writing as soon as possible.
